2006" is a freeware program that was created by Intel Corporation. Wincopy Screen Capture 2006 is a powerful Screen Capturing tool. It is an easy-to-use, fast screen capture software that provides most of the features of SnagIt for free. Almost any area of the screen can be captured and edited or saved to any image format. The user interface of Wincopy is a lot simpler than Snagit and more flexible. Wincopy has an intuitive interface, an easy-to-use drag and drop method for adding text and drawing lines. "Wincopy Screen Capture" can be used on almost any Windows platform, using Microsoft.NET Framework 1.2 or higher. The shape of the cursor matters! We all know that the mouse pointer is often invisible; the target object may not be visible, and yet the cursor may move in a mysterious way, close to that object. Can we do something about it? WinPaint gives some partial answers to this question. First, you can choose to display the cursor as a thick black line if it is close to the target object, or as an empty black circle if it is not. Secondly, you can choose to increase or decrease the area that is attracted by the cursor, which is exactly what a mouse-over effect means. You can also choose to highlight the areas of the target object that are attracted by the cursor. Highlight is done with color, and can be a monochromatic color, or a color index. You

can choose a color from the color palette, or can define your own color (by using the color index), or can use a reference window for the color, or use a different system color (for example, a system-defined button background color). You can also use a nice set of colors that are not defined in your own color palette, and these colors are kept track of in a color palette file that is not affected by WinPaint. You can save a snapshot of the color palette, and load it later for use with a specific image. The colors can also be shared between multiple users with an Open Sharing policy. There are also a few other key features available in WinPaint. All of the available features can be enabled or disabled independently. The most useful features are highlighted on the mouse-over help screen. (Tool tip on the

screen, or the help screen that is located in the right-click menu.) The help screen also displays the mouse-over effect under a 'Pointer Setting' tool. (The effect also appears in the drop down of the Toolbox. The setting controls the area of the mouse-over effect and its intensity.) The help screen also provides a window where a full description of any of the features or settings can be read. The help screen can be disabled (removed) by selecting the off menu or the Help key on the keyboard.

derailed in Belgium, officials said. A picture released by the local railway police shows a car lying in a road after a train derailed in Schaerbeek, northwest of Brussels, Sunday. A spokeswoman said the car had been on a track that went over a bridge. BRUSSELS -- At least 36 people have died and more than 100 are injured, with many more injured in Belgium, after a passenger train derailed in the southern Belgian town of Schaerbeek early Sunday, officials said. Belgium's federal railway operator VRN said in a statement that the passenger train, which was bound for Brussels from Bruges, derailed between Schaerbeek and its destination of Zaventem. Images from a train driver showing a car lying by a road after it had derailed on a line over a bridge was shown on Belgian TV

stations. The exact death toll is unclear and VRN said it will not be known until the investigation into the accident is complete. "Belgium has lost its golden oldie," Prime Minister Charles Michel said in a statement on Sunday afternoon. 'Rammed' A VRN spokeswoman, Anne-Charlotte De Puecher, said eight carriages and the locomotive on the train that had been going to Brussels derailed. A passenger injured as she was leaving her car at the railway station, reportedly suffered a broken leg and was taken to a hospital in Brussels. Interior Minister Jan Jambon said her condition is "not life-threatening." The crash occurred at about 3 a.m. (1100 GMT) in Schaerbeek, which is about

ratings for WinCopia 2006 (5 stars) Alfons Engström Thursday, November 03, 2007

The right VCL components, plus the .NET framework, are necessary for WinCopia's functions. I was searching for a new, user-friendly screen capturing tool after trying the regular Ctrl+Alt+Del. My choice was WinCopia 2006, because it has a slick user interface, a wonderful collection of innovative features, and a truly exceptional collection of helpers for common office tasks like printing, backing up, even setting up printers. WinCopia's core functions -- screen capture, scaling, cropping, highlighting, printing -- work like a dream. The program is straightforward to use and has a clever little built-in magnifier with an option to show content in color. This option is great for viewing text or delicate

---

graphics. As an extra bonus, WinCopia's self-extracting archive is easy to use.

WinCopia uses the most basic of components to create a software package that's genuinely modern. The XCopy DLL that houses the program's basic functionality is a common build of the DLL that's found in Windows applications.

WinCopia also uses the .NET framework, VCL, and MFC to perform its functions.

All of these components have been thoroughly updated for the .NET

framework. Helpful Options: The program has lots of easy-to-understand options. The most important for my purposes are the "Scale and Crop" section and the "Print" section. Two special wizards, "Color" and "Tabs," let you easily configure their functions.
